IN THE CLAIMS

- 1. (Currently Amended) A reinforced structural member comprising:
 - a hollow axle defining a cavity;
 - a bag disposed within said cavity defining a space;
 - a material disposed within said bag filling said space; and
- a suspension component secured to said <u>hollow</u> axle proximate to said material, said <u>hollow</u> axle <u>including</u> a hole with a cap having a locating feature disposed in said hole, said locating feature positioning said suspension component.
- 2. (Currently Amended) The <u>reinforced structural member assembly</u>-according to claim 1, wherein said axle includes a hole and said bag includes a compressed size equal to or smaller than said hole <u>facilitating to facilitate</u> insertion of said bag into said cavity.
- 3. (Currently Amended) The <u>reinforced structural member assembly</u> according to claim 2, wherein a-said cap is installed in said hole enclosing to enclose said cavity.
- 4. (Currently Amended) The <u>reinforced structural member assembly according to claim 2</u>, wherein said bag includes an end having an opening facilitating insertion of said material into said bag.
- 5. (Currently Amended) The <u>reinforced structural member assembly</u> according to claim 4, wherein said end is disposed within said cavity.
- 6. (Currently Amended) The reinforced structural member assembly according to claim 1, wherein said material is a structural foam.
- 7. (Currently Amended) The <u>reinforced structural member assembly</u> according to claim 6, wherein said structural foam is <u>a</u> two-part epoxy.
